
Subject: DeviceMaster RTS - Serial to ETH and Serial?

I have a special computer (not a general purpose machine) that sends data to a character generator (another special purpose computer). Using a DeviceMaster RTS, I want to send the incoming serial port 1 data to the Ethernet port and to the other serial ports.

Can this be done?

If it can be done, how should I do it?

Hi,

By Ethernet Port, do you mean Serial Port (RJ45)? This is different from the Network (Ethernet) port.

If you have RJ45 serial ports, you can send the incoming data to the other serial ports using UDP.

We have some help files and examples here:

http://downloads.comtrol.com/contribs/devicemaster/help_files/udp/
