Hello,

I'm getting this error using the generic Allen Bradley Ethernet Module. I tried to use the EDS file to set up the Device Master UP 1 port DB9 but it got worst.

Can someone help to share more information on this error code?

connmgrIncomingConnection() - ROUTER_EXT_ERR_INVALID_SEGMENT_TYPE_VALUE error (5)

When we installed the device it worked fine until we finish the configuration using Write tag on the Ethernet/IP and serial application.

Thank you.
